## Assembling and Installation Method

- The unit has cooling fans. Ensure that the inlet and outlet vents are not blocked.
- If the unit is used in dusty environment, please consider installing the air filter so that cooling efficiency will not get worse. In that case, please pay sufficient attention to airflow.
- Figures to the right are the recommended installation method when the unit is mounted by screws. When the unit is installed by any other method, please take into account of its weight and secure it.
- Avoid the D installation method in the figure to the right because it will cause stress on the mounting holes.
- Maximum length from the outside of the unit of the mounting screws is 6mm so that the isolation to internal components is ensured. (Refer to right figure).
- Applicable Wire for module R

Applicable Wire

Solid wire	Diameter 0.5mm to 1.3mm (AWG.24 to AWG.16)
Standed wire	0.2mm <sup>2</sup> to 1.5mm <sup>2</sup> (AWG.24 to AWG.16)
Sheath strip length	8mm to 9mm

## Definition of load factor

### ■ Definition of load factor

Load [%] = The largest value of  $A_0, A_{11} - A_{62}$

$$A_0 = \frac{(\text{Sum of each module power})}{(\text{Total output power})} \times 100 = \frac{\sum_{k=1}^6 (I_{k1} \times V_{k1} + I_{k2} \times V_{k2})}{(\text{Total output power})} \times 100$$

$$A_{11}, A_{21}, A_{31}, A_{41}, A_{51}, A_{61} : AK_1 = I_{k1} / I_{OK1} \times 100$$

$$A_{12}, A_{22}, A_{32}, A_{42}, A_{52}, A_{62} : AK_2 = I_{k2} / I_{OK2} \times 100$$

$I_{k1}, V_{k1}, I_{OK1}$  : output current, voltage, and rated current except for V2 in module R

$I_{k2}, V_{k2}, I_{OK2}$  : output current, voltage, and rated current for V2 in module R

Total output power : Dependent upon input voltage

Suffix k means the k-th slot

※If you use the module that apply peak current at the peak current, " $I_{k1}$ " is calculated by peak current.

When Calculating load factor of module, " $I_{k1}$ " is calculated by average current.

A method of use peak current, Refer to 4 Peak in Instruction Manual

### ■ Usage example

[Example1] Method to confirm that AM04-RDBA-0000 can be used under the following conditions.

Input voltage : 100VAC Ambient temperature : 50°C

Output model : slot1 : 5V 12A slot2 : 5V 12A slot3 : 48V 1A slot4 : 24V 2A, 24V 1A

According to the "Derating curve for input voltage", total output power is 250W.

Calculating  $A_{11} - A_{42}$

$$A_0 = (5 \times 12 + 12 \times 5 + 48 \times 1 + 24 \times 2 + 24 \times 1) / 250 \times 100 = 241.2 / 250 \times 100 = 96\%$$

$$A_{11} = 12 / 12 \times 100 = 100\%$$

$$A_{21} = 5 / 8.5 \times 100 = 59\%$$

$$A_{31} = 1 / 2.5 \times 100 = 40\%$$

$$A_{41} = 2 / 3 \times 100 = 67\%$$

$$A_{42} = 1 / 3 \times 100 = 34\%$$

Accordingly, because the "Derating curve for ambient temperature" indicates that up to 100% of the maximum load can be used up to 50°C and the largest value amongst  $A_0, A_{11}, A_{21}, A_{31}, A_{41},$  and  $A_{42}$  is 100%, this assures that these input and output conditions are acceptable.

[Example 2] Method to confirm that AM12-RHGFFE-0000 can be used under the following conditions.

Input voltage : 200VAC Ambient temperature : 50°C

Output model : slot1 : 5V 32A slot2 : 12V 16A slot3 : 12V 10A slot4 : 24V 8A (peak 15A) slot5 : 48V 4A  
slot6 : 24V 2.5A, 24V 2.5A

According to the "Derating curve for input voltage", total output power is 1200W.

Calculating  $A_{11} - A_{62}$

$$A_0 = (5 \times 32 + 12 \times 16 + 12 \times 10 + 24 \times 15 + 48 \times 4 + 24 \times 2.5 + 24 \times 2.5) / 1200 \times 100 = 1144 / 1200 \times 100 = 96\%$$

$$A_{11} = 32 / 32 \times 100 = 100\%$$

$$A_{21} = 16 / 20 \times 100 = 80\%$$

$$A_{31} = 10 / 20 \times 100 = 50\%$$

$$A_{41} = 8 / 10 \times 100 = 80\%$$

$$A_{51} = 4 / 5 \times 100 = 80\%$$

$$A_{61} = 2.5 / 3 \times 100 = 84\%$$

$$A_{62} = 2.5 / 3 \times 100 = 84\%$$

Accordingly, because the "Derating curve for ambient temperature" indicates that up to 100% of the maximum load can be used up to 50°C and the largest value  $A_0, A_{11}, A_{21}, A_{31}, A_{41}, A_{51}, A_{61}$  and  $A_{62}$  is 96%, this assures that these input and output conditions are acceptable.
